WORK EXPERIENCE

Freelance Full-Stack Engineer — Remote, Mar 2026 - Present

- **Buildo**: Developed a full-stack web application for a healthcare R&D laboratory. Consulted an AEC company on integrating LLM agent harnesses into its software architecture.
- **Pipelean**: Designed and improved the **AI evaluation harness** for a conversational agent to measure and raise response quality; developed the web product end-to-end.
- **Northsea**: Integrated third-party APIs into an internal-facing **AI-based estimation** tool.

Full-Stack Engineer, Buildo — Milan, Mar 2021 - Feb 2026

Built end-to-end web applications for scale-ups and large enterprises. Involved in all stages of the software development lifecycle, from requirements gathering to deployment, collaborating closely with designers and stakeholders to ensure alignment with business goals. Internal owner of AI-assisted tools and workflows, and responsible for a public-facing monthly AI news video series for marketing purposes.

- Led development of a **Generative AI reporting platform** serving hundreds of financial managers, automating fund report generation end-to-end. Built data pipelines, a full-stack web application with React and TypeScript, and a conversational **AI assistant** using Large Language Models; created an **evaluation harness** to ensure output quality and reduce manual corrections.
- Shipped a **conversational intelligence feature** enabling sales teams to enhance call preparation and post-call summarization, improving handoff quality and reducing rep onboarding friction.
- Standardized **AI-assisted development workflows** (context engineering, coding agents, spec-driven development) across company squads, improving delivery velocity and code quality through experimentation and team training.
- Built a data-intensive **Excel processing application** with optimized React rendering; reduced user interaction latency by nearly 40% through profiling-driven performance improvements.
- Integrated **Identity and Access Management (IAM) federation** with Azure Active Directory B2C and OpenID Connect (OIDC) for a Kubernetes-based multi-tenant platform, enabling Single Sign-On for 4 development teams and streamlining secure authentication.
- Developed a **Know Your Customer (KYC) service in Go** with a TypeScript SDK and REST APIs for an identity startup, reducing partner integration time by enabling developers to build customized flows with multiple identity providers.

Machine Learning & Computer Vision Research Intern, Datalogic — California, USA, Jan 2020 - Jul 2020

- Built a **Python SDK** and a synthetic image generation tool enabling 4+ researchers to create and manage artificial datasets locally via Docker, accelerating **Machine Learning** experimentation; ran image recognition experiments with OpenCV augmentation pipelines to validate **Computer Vision** solutions for business use cases.

PROJECTS

Text-Expander Packages Web Hub — **espanso/hub-frontend**

- Designed and implemented the official Espanso Hub frontend, improving the package discovery and installation experience; the hub now serves ~500 weekly visitors.
- Established a Discord community and grew it to several hundred members, advising on community strategy, technical improvements, and issue resolution.

Personalized Auditory Experience Web Application — **arabello/night-focus**

- Developed a web application for customizable auditory experiences to enhance work focus, integrating post-processed ambient sounds captured and edited with Ableton Live.

TECHNICAL SKILLS

- **Languages & Frameworks:** TypeScript, JavaScript, React, Node.js, Python, Scala, Go
- **Artificial Intelligence:** Large Language Models (LLMs), Generative AI (GenAI), Conversational AI, LLM integration, Evaluation-driven development, Prompt engineering, AI-assisted development
- **Cloud & Platform:** Kubernetes, Docker, GitHub Actions, Azure Pipelines, Azure Active Directory B2C (Azure AD B2C), OpenID Connect (OIDC), CI/CD pipelines
- **Data & Databases:** PostgreSQL, Snowflake, Pandas, SQL
- **Product & Delivery:** Stakeholder collaboration, UX optimization, Agile development, Cross-functional collaboration, Product delivery

EDUCATION

Master of Computer Engineering, University of Bologna — 2018 - 2021

Specialized in Artificial Intelligence, Machine Learning, Cloud Infrastructure, and Distributed Systems. Graduated with honors (110/110 cum laude).

- Won first place in the university startup incubator with an Android-based project.

Bachelor of Computer Engineering, University of Bologna — 2015 - 2018
